

INTRODUCTION TO
CHAPTER THIRTEEN

Copyright © 2000-2005 by David E. Sakrisson and Friends

Before the direction of this book turns to the study of the mantle region of this Earth (and the remainder of the Creation days), let us examine some of the interesting things which the writer has noted about the general construction of the inner Earth. This chapter examines more closely the cooling system used in the nucleus of this Earth. It also notes the nuclear fuel zones, and other peculiar layering sequences which are built into the inner Earth. Let us remember that all of these fascinating processes were initially created and set in motion on Day One of the Creation week, and are still efficiently at work today.

This Earth is shown to be a living orb. All of the special processes found in this chapter work to keep this Earth's environment under control. This allows the Earth to be a habitable place for both man and animals. Please note that certain curious patterns in the sequence of elemental layering are given. This information should be helpful to those with a desire for further study, to find out why these patterns exist in the layering sequences. What is the purpose of these sequences, and how do they function? Of even greater importance may be the constant change which is rapidly proceeding in one of the natural forces. This natural force appears to be an important controlling factor in the overall operation of this Earth.

As this chapter comes to a close, let us consider the potential effect which a momentous change in one particular natural force may produce in the days ahead. May our hearts be truly right toward God, that we will have nothing to fear in the days ahead. Let us also give due praise to God Almighty for the incredible display of, and perfect control of, that unprecedented power which was used during the Creation process.

Chapter 13: EARTH SENSE

Copyright © 2000-2005 by David E. Sakrisson and Friends

WORD TO THE WISE

It is written: *“My son, if thou wilt receive my words, and hide my commandments with thee; so that thou incline thine ear unto wisdom, and apply thine heart to understanding; yea, if thou criest after knowledge, and liftest up thy voice for understanding; if thou seekest her as silver, and searchest for her as for hid treasures; then shalt thou understand the fear of the LORD, and find the knowledge of God. For the LORD giveth wisdom: out of his mouth cometh knowledge and understanding.”*¹

CHAPTER BRIEFING

Friend, this chapter examines certain interesting features which the writer has noted within the elemental layering of the Earth's core. Much useful knowledge can be gained by mankind, if they would but closely examine those things which God has done in the Creation of this Earth.

This chapter will examine only a few of the things which the writer has observed. An explanation of the 'wiring' of the Earth, and its communication system for the main control-unit will have to be saved for a separate Volume, as God allows. These subjects truly are beyond the scope of this relatively short and basic introduction to the Earth.

AN OBSERVATION

In Chapter 8, it is observed that a very interesting interchange occurs within the nuclear reactor of this Earth. During the uranium decay series, the radon-222 emits an alpha particle and then converts into polonium-218.² When a polonium-218 nuclei experiences a beta decay, it converts into the element astatine-218.³ The astatine-218 then emits an alpha particle, and converts into bismuth-214.⁴

In the above radioactive decays, the radon-222 and the rather short-lived astatine-218 are emitting alpha particles. These alpha particles are then able to bombard the enveloping layer of bismuth. When bismuth is bombarded with alpha particles, it may then produce the element astatine. This is that element from which the alpha particle initially emanated as it rapidly decayed.⁵ What an interesting situation!

There appears to be a continual conversion cycle of astatine to bismuth, and bismuth to astatine, occurring at the shielding layer around the raging nuclear reactor at the core of this Earth. It appears that God created the shielding layer of bismuth to be continually renewed, and for good reason.

This continual renewal process prevents the bismuth layer from ever deteriorating, and thereby having its integrity compromised. This helps to prevent any escape of the great volume of destructive heat and radiation which the bismuth layer is given to confine.

ANOTHER LOOK

In Chapter 6, the electric cooling system for the nuclear vessel (which surrounds the main core reactor) was first introduced. The phenomenon of electric-wind cooling will now be examined further. Let us study its application as used in man-made systems for cooling purposes, the heat treating of metals, the improvement of weld quality, and in the metal coating of various parts.

In man-made electric-wind cooling systems, when using a negatively charged static electric wind, materials whose starting temperature is 250 to 300°F (121 to 149°C) may be rapidly lowered to a temperature of 100 to 140°F (38 to 60°C).⁶

Friend, in the above example, the starting temperature is relatively low, and yet the temperature reduction is from 150 to 160°F (66 to 71°C). This is a 53 to 60 percent drop in temperature.

GREATER EFFECT

Static-electric cooling appears to be very effective. A good example of this process is a piece of copper sheet which is heated to about 1,100°F (593°C) by a propane torch. As the flame of the torch continues to send its heat into the copper sheet, the use of static-electric cooling will rapidly drop the metal's temperature by about 300°F (149°C).⁷

THE COMPARISON

Friend, at an 1,100°F (593°C) starting temperature, the temperature drop of 300°F (149°C) is more than double of that value of temperature drop which was experienced in the first example, which had the lower starting temperature of 250 to 300°F (121 to 149°C). Using static-electric cooling, it appears that the higher the initial starting-temperature of the material, the greater will be the overall drop in degrees of temperature. This is an interesting phenomenon indeed!

FURTHER DEGREES

At the high temperatures at which metal is welded, the metal temperature may be immediately quenched by 400 to 500°F (204 to 260°C) using just a static-electric wind. By using this cooling process, a finer grain is also produced in the welded metal. This phenomenon works to increase the welded part's longevity in the working environment.⁸ This example also works to show the value of using an electric-wind for cooling purposes within the central core of this Earth.⁹

REQUIRED POWER

Friend, in the examples which we have just examined, only about 20,000 volts of static electricity is used. To produce space-charge fields about 2 or 3 inches (5 or 7.6 cm) wide by 40 feet (12.2 m) long, only about 6 watts of power is required.¹⁰ This truly is a very small amount of power to produce this amount of space charge. Considering all of the foregoing information, what then would be the cooling effect of that extremely powerful and intense flow of high-voltage, negatively charged electricity within the core of the Earth's nuclear reactor? Friend, let us please observe the beauty, simplicity, and infinite wisdom of God the Father! May we truly honor Him.

MULTIPLE ZONES

The Earth has many specific elements within the layering of the inner core. These elements are somewhat grouped into zones according to atomic weight (as found on any Periodic Table). Each type of zone serves a specific function, or a number of functions, in the overall operation of the Earth. A few of these specific zones will now be examined.

NUCLEAR ZONES

By examining the layers within the Earth's inner core, it becomes apparent that there are definite zones of nuclear fuel contained therein. These nuclear fuel zones power the many Earth-systems. The first nuclear zone is the main reactor at the nucleus of the Earth. The fuels for this reactor are the heaviest naturally occurring elements on the Periodic Table, and all are radioactive. They range from atomic numbers 94 thru 84.

The next outer nuclear zone in the Earth appears to be the fuel for some type of inner battery. The radioactive fuel for this battery is the element promethium. It has the atomic number of 61. This inner battery appears to be the power-source for the main control system of the Earth.

WISDOM OF GOD

It should here be noted that there are layers consisting of radiation and neutron shielding materials situated between the nuclear battery of promethium and the surrounding main control system. This shows the great wisdom of God the Father! It appears that God did not want the function of this main control system to be compromised in any manner.

NEXT NUCLEAR ZONE

The next outer nuclear zone appears to be another electronic-type of component within the Earth. The radioactive fuel in this layer is element number 43, technetium. This radioactive, metallic element appears to be sandwiched between plates of two other materials. These two materials, in turn, possess superconducting properties. Ruthenium would be on the inner side of the technetium, and molybdenum on the outer side.

NATURAL ASSOCIATION

The following is of special note. For years, scientists thought that technetium was not a naturally occurring element. It was not until 1988 that scientists began detecting minute quantities of technetium in the molybdenum ore in a deep mineshaft in Colorado.¹¹ This special find in nature should help indicate the relationship which technetium and molybdenum have in the layering of the Earth. This particular piece of history should also help us to realize that scientists do not always know the real truth in a matter, and may continue in such a state for a considerable period of time.¹²

OUTER NUCLEAR ZONE

The outermost of the nuclear zones is that consisting of the element rubidium (atomic number 37). This radioactive fuel source appears to be part of another nuclear battery. This outer battery appears to be the power source for the outer control system of the Earth. This particular control system appears to be a type of outer governor for the electrical field of the Earth. This is that electric field which mankind observes from the surface of this Earth.

FUNDAMENTAL TRUTH

Four nuclear radiation zones in the Earth have been shown. As noted, each of these zones has specific properties and purposes. These zones were placed in their specific location by the wisdom of the Lord God Almighty. They were placed in their special locations to fulfill His purpose.

OUTSIDE THE NUCLEAR ZONES

The Earth is designed in a very special manner. There truly are many special things which can be noted about the inner makeup of this Earth. There is one very interesting phenomenon which the writer noticed upon examination of the Earth's layering. It is of note that outside each of the major zones of radioactive elements lies a zone of transition elements. The purpose of these elements in relation to the radioactive zones in the Earth-layering is worth some further research by those wanting a deeper insight into the workings of this Earth.

The raging nuclear reactor at the core of the Earth includes those elements with atomic numbers from 94 to 84. This core reactor is soon surrounded by a zone of transition elements. Included in this special zone are those elements with atomic numbers from 80 to 71.¹³ These transitional elements are those from mercury to lutetium.

ONE BATTERY

What appears to be the inner battery of the Earth, is powered by the radioactive element promethium. This element is given the atomic number of 61. This inner-battery fuel is, for some special reason, imbedded directly within a series of paramagnetic layers.¹⁴ These paramagnetic layers, in turn, are soon surrounded by a zone of transition elements on their outboard side. This outboard group of transition elements includes those with atomic numbers from 48 to 39.¹⁵

Interestingly enough (and worthy of independent study), sandwiched in the middle of the outboard group of transition layers is the radioactive fuel source called technetium. Technetium has the atomic number of 43.

The outboard cluster of elements includes all those from atomic number 48 to number 39. There are a total of ten elements in this stack. Four transition elements lie outboard of the radioactive element number 43, and five transition elements lie inboard of this fuel source.

ANOTHER BATTERY

What appears to be the outermost atomic battery of the Earth is powered by the radioactive element rubidium. This outer battery system is ultimately surrounded by another zone of transition elements. This zone of transition elements includes those with atomic numbers from 30 to 21.¹⁶

INTERESTING PATTERNS

Beginning at the radioactive nucleus of the Earth, there appear to be patterns which are as follows (from heaviest to lightest): alkaline earth metal, alkali metal, noble gas, and halogen. These patterns are found in the following groupings of atomic numbers: 88-85, 56-53, 38-35, 20-17, and 12-9. The exact reason for the foregoing patterns is worthy of further independent investigation.

It should be noted that once outside of the main nuclear reactor at the very core of this Earth, the above-noted pattern is generally preceded by a grouping of heavier transition elements. This complete pattern (as found within the layering of the Earth) is shown in the illustration to the left. Again, for those desiring to learn from God's Creation, the reason for this pattern is also worthy of further independent investigation.

Let us now examine the end of this above-noted series of patterns. Let us look to the lighter-weight end of the Periodic Table. For some strange reason, the group with atomic numbers from 4 to 2 are not preceded (on the heavier, deeper side) by elements which are of the transition type. Therefore, this last, outboard pattern in the Earth-series follows as: alkaline earth metal, alkali metal, and noble gas. But, the ending is different. The next lighter element is not a completion of the normal series. This last and lightest of the elements is hydrogen. It is not classed as a halogen (or salt former).

THE LIVING EARTH

Turning to other matters, it is a known fact that there are irregular changes, or fluctuations, in the magnetic field of the Earth.¹⁷ It appears that these fluctuations occur, partly, as a result of the operation of those paramagnetic control mechanisms within the Earth. It appears that God the Father truly designed a living Earth. It may be 'living' in the same sense that a tree is living.¹⁸

Contrary to what some may believe, this Earth is not just a simple piece of rock trapped in space, and orbiting around the sun. Rather, it strongly appears that this Earth is one of the most advanced pieces of technology that man could ever dream of. This advanced piece of engineering was created by the Wisdom and Hand of Almighty God. It was designed for His purpose. Man is also another one of these advanced pieces of God's technology./ It appears that mankind was to be the crowning creation, as God finished His mighty works of old.

BASIC BELIEF

Mankind has stubbornly pushed outward in science in the direction which he believes to be progress. It appears that mankind often simply buries himself deeper in his confusion. It is time for mankind to quit fighting against his very Creator, and begin to closely examine the mighty works of the Everlasting God. There are many valuable lessons to be learned from the works of God which would be of benefit to man. Just within this Earth, which God created, are numerous lessons to be learned.

MAGNETICALLY CONTROLLED

The transition elements all have metallic properties of malleability, ductility, and a high conduction of heat and electricity. The transition elements also have high densities and melting points. Above all this, the transition elements possess magnetic properties of one form or another. For the most part, they are said to be paramagnetic.¹⁹

The magnetic properties of the transition elements allows them to interact with the fluctuating magnetic field of the Earth. For this reason, some, or possibly all of their specific properties can be automatically controlled by the main control-system of the Earth.

In certain cases, it appears that some of the magnetic properties of the transition elements allow them to act as part of a magnetic shield for each nuclear zone in the inner core of the Earth. This type of magnetic containment field was discussed earlier in this book, in Chapter 6.

OF GREAT NOTE

Let us examine the magnetic characteristics of the Earth a little further. The main geomagnetic field of the Earth has not remained constant, but is steadily changing with time. (This phenomenon is also noted near the end of Chapter 21.) The intensity of the main magnetic field appears to be steadily decreasing at the present rate of approximately 6 to 10 percent every 100 years.²⁰ This decay in the strength of the main magnetic field of the Earth should cause people to take note.

END RESULTS

The steady decrease in the main geomagnetic field of the Earth, by 6 to 10 percent every 100 years, must ultimately have an effect upon the normal operation of this Earth. This decrease in magnetic field strength potentially may be leading to some major physical and geological changes, both within and on the face of this Earth.

Since all the various systems in the core of the Earth appear to be controlled magnetically, this decrease in field strength may allow for some of these systems to go out of their normal control parameters. Once the delicate balance of control is upset, major changes or catastrophes can readily occur. The potential for major catastrophes is directly in line with the prophecies contained within the Word of God.

APPROACHING DAY

In the Word of God are shown devastating geologic upheavals which will come upon this Earth in the days ahead. A number of these massive upheavals will be discussed in more detail in Volume Five (*Listen to the Earth: The Fire of God*).

This Earth will ultimately melt and burn. All the works of man shall be utterly destroyed. The Earth will change its outer garment. The outer garment of the Earth is its outer, habitable surface. The Bible shows the forces of nature going totally awry. Yet, they will not be out of control at all, for they will be completely under the Divine command and direction of Almighty God.²¹

RAGING INFERNO

The Lord God Almighty created the Heaven and the basic (without form and void) 'blob' of the Earth in only one day. All of this truly occurred, just in the manner which the Word of God proclaims. The swiftness with which the Creation of the Heaven and the Earth happened would truly have appeared as a mighty nuclear reaction. Think about it! God simply spoke, and there it was! In an instant, a raging nuclear inferno was before His eyes.

PERFECT CONTROL

As mighty as the nuclear reaction of Creation might have appeared, it was a perfectly controlled reaction. It was under the full control of the Wisdom and mighty Hand of God. The proof of this control is written in the layering and efficient operation of the Earth. It is written in the specific characteristics of each element contained within this Earth. The proof of this control is written in a truly living Earth.

The proof of that perfect control which God had upon the Creation of the Heaven and the Earth is written in a solar system which operate flawlessly. The proof of this perfect control is written in the flawless movement of what mankind calls the galaxies. Yes, the proof of the perfect control of God in the very Creation is written in the whole of the universe. And yes, this proof of the perfect control of God in the Creation of all things is written within each and every one of us.

TRUE PERSPECTIVE

The psalmist cries: *“O LORD our Lord, how excellent is thy name in all the earth! Who hast set thy glory above the heavens. Out of the mouth of babes and sucklings hast thou ordained strength because of thine enemies, that thou mightest still the enemy and the avenger.*

“When I consider thy heavens, the work of thy fingers, the moon and the stars, which thou hast ordained; what is man, that thou art mindful of him; and the son of man, that thou visitest him? For thou hast made him a little lower than the angels, and hast crowned him with glory and honour.

“Thou madest man to have dominion over the works of thy hands; thou hast put all things under his feet: all sheep and oxen, yea, and the beasts of the field; the fowl of the air, and the fish of the sea, and whatsoever passeth through the paths of the seas. O LORD our Lord, how excellent is thy name in all the earth!”²²

Friend, so ends another Chapter in this FIRST EDITION of

9. During Days One, Two, and Three of Creation, space-charges could have worked very rapidly to cool down the molten 'Earth-blob.' This process may have produced a finer grain material within the structure of the Earth. Furthermore, it should be noted that many materials which are insulators at room-temperature, become electrical conductors in their molten state. In such a state, the cooling power of the electric wind may possibly act more effectively upon them.

12. There may be a reason why the scientists may remain in the dark concerning the truth for quite a period of time. The noted radio astronomer, Gerrit L. Verschuur, in his 1996 book called *Impact!*, on page 27, speaks of the corruption, personal egos and vendettas in which the science community is awash. It appears that these problems block important scientific discoveries from ever being printed in a respectable publication. Therefore, many important discoveries are never brought to the attention of the rest of the scientific community.

14. Let us note something very special about the layers of paramagnetic elements in which the promethium is embedded. All of these paramagnetic elements are rare-earth metals. This is the only major depository of rare-earth metal layers in the whole layering scheme of the Earth. It should cause us to wonder, since so many types of rare-earth metals are situated at this particular location. As noted in the reference section of Chapter 6, these rare-earth metals may function as a type of magnetically-based cooling system (or temperature control system) for the inner Earth. How the promethium embedded within the rare-earth layers may power this system, and then, how interactions between these and other layers may work to operate this system, would be an interesting study for the independent researcher.
